Junhao JIAN, Jamison

DoB: Aug 2003 • Guangzhou, China • +852 84963816 • junhao.jian@outlook.com • Hong Kong Citizen (IANG)

EDUCATION BACKGROUND

(In process) Lingnan University Hong Kong SAR
Master of Science in Data Science Sept 2025 - Jul 2026

- **Cumulative GPA:** 3.67/4.0 in Term 1
- **Key Courses:** Data Mining, Database Management, Data Science Statistics, Fundamentals of Artificial Intelligence, Business Machine Learning.

Lingnan Normal University China Mainland
Bachelor of Science in Data Science and Big Data Technology Sept 2021 - Jul 2025

- **Cumulative GPA:** 3.37/5.0 (Top 10%)
- **Key Courses:** Data Mining and Machine Learning, Deep Learning, Statical Analysis, Data Visualization, C Language, Python/R Programming, Hadoop Big Data Technology, Data Structure, Database Principles.

INTERNSHIP EXPERIENCE

Tongcheng Travel Holdings Limited *Data Operations, Intern* Jul 2024 – Dec 2024

- Used pivot tables & SQL to extract and analyze hotel business data, completing efficient data visualization. Also managed daily O&M of the hotel's Purchasing, Sales, and Inventory (PSI) system, monitoring inventory in real-time and tracking material flow systematically.
- Represented hotels/OTAs in supplier negotiations for material procurement and outsourcing cooperation. Participated in the launch of the hotel room new retail project, and oversaw hotel project operations & IT coordination—translating business needs into technical solutions to boost customer order conversion rates.

PROJECT EXPERIENCE

Smart Contract Vulnerability Detection for HK Web3 Market *Team leader* Jan 2026 - Present
Python, LLM Multi-Agent Systems, Smart Contract Analysis, Solidity, Research Writing

- Collaborated with my academic supervisor to research smart contract security in Hong Kong's Web3 market, focusing on LLM multi-agent collaboration frameworks for automated vulnerability detection; analyzed common vulnerabilities (reentrancy, access control, integer overflows) and validated the efficacy of multi-agent systems in identifying such flaws compared to traditional single-agent tools;
- Leveraged intermediate-level Solidity programming skills to build test smart contract samples with typical vulnerabilities, then designed and optimized multi-agent workflows (task partitioning, cross-agent evidence verification, structured reporting) to enhance detection accuracy and reduce false positives, contributing to strengthening the security and stability of Hong Kong's Web3 market.

Social Media Sentiment Analysis System *Team leader* Oct 2024 – Apr 2025
Python, Web Crawling, Sentiment Analysis, LSTM, Data Visualization

- Worked with my academic supervisor to process Weibo hot topic datasets, aiming to identify public sentiment trends and quantify user influence on social media platforms;
- Used Python (Requests) to crawl 89k+ data points (comments, likes, reposts), then cleaned and preprocessed data (Jieba segmentation, stopword removal) with Pandas. Built TextBlob-LSTM hybrid sentiment models via Python, and created interactive visualizations (engagement rate charts, word clouds) using Matplotlib.

SKILLS & AWARDS

- **Language Skills:** Cantonese(native), Mandarin(native), English(intermediate);
- **Professional Skills:** Python, C, R, Power BI, Tableau, MySQL, Hadoop, Solidity;
- **Awards:** Potential Award in the Smart City Field of the 2023 Beijing Artificial Intelligence Industry Large Model Innovation Application Competition; Outstanding Individual of Lingnan Normal University; Postgraduate Entrance Examination Scholarship; Excellent Intern in Professional Internship.
